SUMMARY

- Exceptional web developer with 3+ years of experience in an agile work environment designing, implementing and maintaining scalable Web applications with modern tools and technologies
- Self-driven engineer with rich experience in test-driven development, CI/CD, and cloud technologies

EXPERIENCE

Freelance
Front-end Developer

Remote
Feb 2020 – Present

- Worked with various international clients from 5+ countries with new and ongoing projects
- Development of Website with HTML, CSS, and JavaScript with a responsive-mobile first approach
- Created SPA(s) with ReactJS and Server-side rendering apps with NodeJS using TypeScript and JavaScript

Digital Science Web Technologies
Front-end Developer (Full-time)

Ahmedabad, India
Nov 2018 – Jan 2021

- Developing Single Page Web applications with modern JavaScript frameworks such as React, Bulma, etc.
- Researched and implemented correct coding practices for SEO, resulting in an average of 60% higher search engine rankings than previously
- Collaborated with a team of 10 developers for 8+ months on a major website redesign in Agile fashion
- Maintained 30+ client websites and provided technical assistance to 100+ clients on a full-time basis
- Implementing responsive and mobile-first development strategies in every project
- Used Git and GitHub for continuous and incremental development of the project

PROJECTS

Timesheet Tracker (Capstone Project)   https://timesheet-tracker.netlify.app/
Full-stack Application that manages users' courses and tasks along with features like time tracker, background music, timesheet CSV export, teacher dashboard, dark mode, and admin panel.
- Build with React (TypeScript) with Vite for performance optimization and faster deployment.
- Authentication with Firebase provides users to Sign in with Google as well as an option for email sign-up
- Responsive and mobile-first development with TailwindCSS resulting in smaller CSS in production
- Developed REST APIs with ExpressJS with authentication middleware and role-based access control
Technologies: React, TypeScript, NodeJS, ExpressJS, PostgreSQL, OAuth, TailwindCSS

Chat Room Application   Source code | https://live-chat-6i8k.onrender.com/
- A live chatroom application built with Node-ExpressJS backend with socket.io, ReactJS-TypeScript in front-end
Technologies: NodeJS, Express.js, Web-sockets, React, TypeScript, TailwindCSS

Make-up Affiliate Marketing Website   Source code
- Make(Things)Up is an affiliate marketing website for makeup products.
- Utilizing two Public APIs: one for fetching different makeup product information and another to convert the currency rate
Technologies: NodeJS, Express.js, EJS, Bootstrap
